Sidali DJEGHBAL

(213) 672865639 | connect@sidali-djeghbal.dev | LinkedIn | GitHub | Portfolio

TECHNICAL SKILLS

Languages (by proficiency): Python, JavaScript, TypeScript, C, Java, Bash
Tools and Frameworks: Node.js, React.js, Tailwind CSS, FastAPI, Django, Express.js, Docker, Git, Github
AI & Data Tools: GitHub Copilot, OpenAI API

RELEVANT EXPERIENCE

Algerian Tech Makers | Remote **March 2026 - Present**

Full Stack Software Engineer

- Public site: Landing page, about, and initiative/campaign detail pages (hero carousel, services, testimonials with featured video, FAQ, contact form, newsletter signup) — all fully responsive and RTL.
- Admin CMS: Built a React-Admin dashboard where non-technical staff manage initiatives, campaigns, testimonials, contact messages, and newsletter subscribers; included a visual block-based newsletter composer with templates, image upload, and email quota tracking.
- Email engine: Resend-based transactional email (admin alerts + auto-replies), newsletter broadcasting with drag-and-drop blocks, one-click unsubscribe, and an inbound-email webhook with threaded replies via TipTap.
- SEO / GEO optimization: Server-rendered React Server Components, JSON-LD structured data (NGO/WebSite/FAQPage), dynamic sitemap, `llms.txt` + dynamic `llms-full.txt` for AI-engine discovery, IndexNow instant indexing, and geo meta tags.

TechGeeks | Hybrid **Oct. 2024 - Jan 2026**

Frontend Engineer

- Built the SolveIt3.0 challenge solving page with embedded IDE and interactive 3D dashboard.
- Combined Blockly's visual editor with a C code generator so students see blocks ↔ code side by side.
- Added step-by-step challenges, a user contribution feature for adding/modifying algorithms, and auth-backed progress saving (online version only).
- Contributed to the club's competitive programming platform, which hosts challenges with an in-browser IDE and a points/ranking system.

Daad Blockly | Open Source **May 2025 - Aug. 2025**

Author & Maintainer

- Wrote a custom Daad code generator translating Blockly state into valid Daad source, plus a pure, DOM-free app logic layer that is unit-tested headlessly with Vitest.
- Built 50+ custom block definitions covering variables, logic, lists, dicts, functions, classes, loops, and built-in modules (math, random, time, system, path).
- Cross-platform packaging for Linux (AppImage/deb), Windows (NSIS), and macOS (dmg) across x64/ARM64 via electron-builder, with a GitHub Actions auto-release pipeline triggered on version tags.

EDUCATION

University of 8th May 1945 at Guelma | Algeria **Oct 2023 - Present**

Computer Science Engineering - AI Specialization

- **Relevant Courses:** Files and Databases, Modern Web Development, Mobile Development, Operating Systems, Data Structures, Algorithms & Analysis, Foundations of Programming..

PROJECTS

Hodory Attendance System | *Github Repo Link : hodory-attendance-system* **Jan. 2026**

- Designed the FastAPI backend with SQLModel/SQLAlchemy models, JWT auth, and auto-generated Swagger/ReDoc API docs.
- Built the student mobile app in Expo/React Native (Expo Router) including a justification/absence request flow and Shipped admin and teacher dashboards in Next.js, wrapped as distributable Electron desktop apps.

SuperMarket Management | *Github Repo Link : SuperMarketManagement* **May. 2025**

- A management dashboard for supermarkets: add/manage cashier accounts, track cash-register machines with visual status indicators, and assign cashiers to machines on shift schedules — all in a dark, responsive UI.

UDEMIHA | *Github Repo Link : Udemiha* **Aug. 2024**

- Automated the discovery and enrollment of free Udemy courses: scrapes coupon deals from multiple sources, filters them by category, language, rating, and instructor, then enrolls automatically using credentials or saved browser cookies — with a summary of savings.
- Configurable filtering engine + safe enrollment via credentials or cookies.
